REUSE INCENTIVE

WORKING GROUP MEETING #5

THURSDAY, APRIL 16, 2026

LICENSING AS INFRASTRUCTURE FOR OPEN SCIENCE

AGENDA

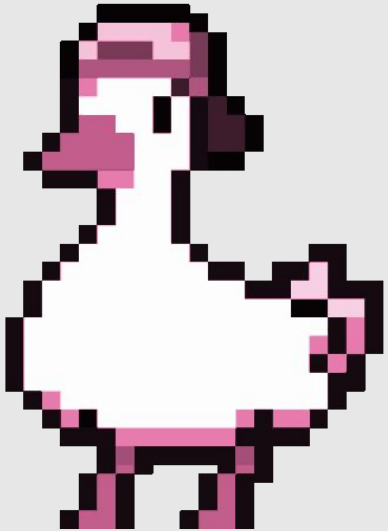
1. Welcome and Agenda Overview
2. Icebreaker Game
3. Recap: Goals
4. Activity: Brainstorming By Object
5. Closing Discussion

ICEBREAKER GAME

As a group:

- The Wiki Game: Who can get from “**duck**” to “**horse**” the fastest? 😄

- Visit https://wikispeedruns.com/play/quick_play?prompt_start=Duck&prompt_end=Horse&lang=en



RECAP: WORKING GROUP GOALS

1. Surface points of friction around reuse and licensing of modular research

2. Explore how licensing serves as a technical and cultural enabler of reuse in modular research

3. **Produce a document with a framework and recommendations for modular science reuse**

ACTIVITY: OUR RECOMMENDATIONS

1. Ensure readers **know if and how they can reuse** a modular research object as a primary source.
2. Ensure authors **know if and how they can share and license** modular research objects, and what proper licensing entails.
3. Ensure authors and funders have a way to **track attribution and reuse** of their research. This improves the process of knowing how or where their research is being used.
4. Ensure platforms have a way to **show attributions in context** for various modular object types, and for primary vs. secondary sources.
5. Ensure readers have a way to **know and easily do what is required of licenses** as components are reused.
6. Ensure authors and readers have access to a **seamless formal research environment**, platform, or standard protocol for easily publishing and reading modular research, with outputs interoperable across platforms.
7. Ensure authors and funders have **attribution options during informal sharing** as well.

ACTIVITY: MODULAR SCIENCE

Modular science reimagines sharing and reusing research beyond traditional outputs like papers and preprints. Instead of a static document or PDF, authors can publish and readers can access research in a modular way, with each modular object able to be shared, embedded, or exported:

1. **Paper repo** (PR) is the full collection of all modular objects that make up the body of research.
2. A PR is made of **Hypothesis Headlines**, which are containers of panels of evidence (PE).
3. A **Panel of Evidence** supports its claim with its contained modular objects of text, figures, and tables.
4. The **individual text block /figure/table objects** exist within each panel of evidence.
5. PEs also contain **Panel Dependencies** (PD), with contained modular objects of code, research datasets, design files, or lab notes.

Breakout groups brainstorm considerations for enabling modular research infrastructure, related to each level of modular object. Consider technical specs, incentives, and actors and permissions.

Ryan Marien
Head of Legal
BioRender

Michael Markie
Head of Innovation Initiatives
eLife

Rodrigo Migueles Ramirez
Graduating PhD Student
McGill University

Anton Molina
Director
Open Source Ecosystem

Sharon Newman
Systems Lead
b.next

Dylan Roskams-Edris
Advisory Services Lead
Conscience

Brian Rose
Associate Professor
University at Albany (SUNY)

Jonathan Starr
ED, Open Source Endowment;
PM, NumFOCUS; *Co-founder,*
SciOS & IOSP; *PM*, DeSci Labs

Alex Talsma
Open Source, Data, and AI
Microsoft

Ronen Tamari
Co-founder
Cosmik Network

Sam Teplitzky
Open Science Librarian
UC Berkeley

Hao Ye
Curriculum Lead
Community for Rigor
University of Pennsylvania

THANK YOU!

We brought our differing roles and lived experiences to the shared work of reimagining research beyond traditional research outputs and shifting behaviours toward the reuse of modular research outputs.

Clear, open licensing for modular research ensures it can be responsibly reused, attributed, and integrated by both humans and machines.
