# REUSE INCENTIVE

## WORKING GROUP KICK-OFF MEETING

## THURSDAY, FEB 12, 2026

LICENSING AS INFRASTRUCTURE FOR OPEN SCIENCE

# AGENDA

1. Welcome and Agenda Overview
2. From Traditional to Modular
3. The Need for Modular Licensing
4. Working Group Goals
5. Organizational Leadership
6. Working Group Members
7. Member Introductions
8. Next Steps

# FROM TRADITIONAL TO MODULAR

We bring our differing roles and lived experiences to the shared work of reimagining research beyond traditional research outputs like papers and preprints.

Emerging modular research outputs include reproducible notebooks, scientific figures, tables, data, methods, and code.

If we want science to be reused into the future, we need to make it worth it for researchers, and shift behaviours toward the reuse of modular research outputs that are published and shared independently.

# THE NEED FOR MODULAR LICENSING

Clear, open licensing is essential for ensures modular research can be responsibly reused, attributed, and integrated by both humans and machines.

Reuse is still treated as optional or downstream. What would it look like to treat reuse, and the permission to reuse, as core infrastructure for how science is shared?

# THE NEED FOR MODULAR LICENSING

Researchers need clear and practical incentives, licensing systems, and technical tools that support confident reuse and remixing of modular components.

With embedded object-level licensing and surfacing context such as provenance, execution status, and reuse signals on modular research, trust and permission can be carried together. This supports researchers in reusing work with confidence, and also enables AI systems to trace, assemble, and recommend trustworthy scientific components.

# WORKING GROUP GOALS

1. Surface points of friction around reuse and licensing of modular research

2. Explore how licensing serves as a technical and cultural enabler of reuse in modular research

3. Produce a document with a framework and recommendations for modular science reuse

# ORGANIZATIONAL LEADERSHIP

## CREATIVE COMMONS

*Monica and Taylor*

The Working Group is led by Creative Commons (CC), whose long-standing leadership in open licensing and global reuse drives the stewarding of this work.

## CONTINUOUS SCIENCE FOUNDATION

*Courtney and Rowan*

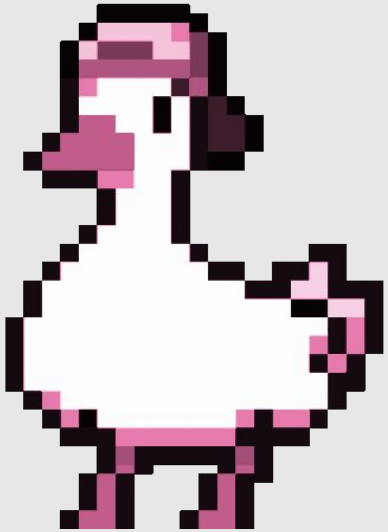
CSF identifies gaps, surfaces reuse-enabling practices, and co-develops resources that prepare the research ecosystem for a more dynamic, connected, and AI-ready future.

# MEMBER INTRODUCTIONS

Breakout groups - grab a pen and paper, pair up, and share

- Name and location
- How can licensing modular research help your work?
- What would you rather fight: 100 duck-sized horses, or one horse-sized duck?

We will reconvene in 5 minutes and share with the group :)



# WORKING GROUP

**Matthew Akamatsu**
*Asst. Professor & Co-founder*
University of Washington & Discourse Graphs Project

**Tony Alves**
*SVP, Product Management*
HighWire Press

**Alex Argüelles**
*Technologist*
comun.al

**Femi Arogundade**
*Open Science Community Manager,* WACREN

**Courtney Babott**
*Co-founder*, Continuous Science Foundation

**Maria Bagonis**
*Data and Technology Advancement Scholar / Senior Research Fellow,* NIH

**Taylor Campbell**
*Open Science*
Creative Commons

**Jonny Coates**
*Executive Director*
Rippling Ideas

**Rowan Cockett**
*Co-founder,* Continuous Science Foundation

**Simon Duerr**
*Assistant Professor*
HES-SO Valais-Wallis

**Mathïs Fédérico**
*Founder*
Bycelium

**Emily Ford**
*Director,* Open Research Funders Group

**Matthew Giampoala**
*Vice President, Publications*
American Geophysical Union

**Torsten Goerke**
TU Dresden Center for Open Digital Innovation and Participation (CODIP)

**Josh Gottesman**
Michael J Fox Foundation

**Monica Granados**
*Director,* Open Science
Creative Commons

**Ebony Gunwhy**
*PhD Researcher*
The University of Sheffield, United Kingdom

**David Lang**
*Executive Director*
Experiment Foundation

**John Laver**
*Postdoctoral Fellow*
Dept of Cell and Systems Biology, University of Toronto

**Ryan Marien**
*Head of Legal*
BioRender

**Michael Markie**
*Head of Innovation Initiatives*
eLife

**Rodrigo Migueles Ramirez**
*Graduating PhD Student*
McGill University

**Anton Molina**
*Director*
Open Source Ecosystem

**Sharon Newman**
*Systems Lead*
b.next

**Pavithran Narayanan**
*Content Acquisition Specialist*
Wiley

**Dylan Roskams-Edris**
*Advisory Services Lead*
Conscience

**Brian Rose**
*Associate Professor*
University at Albany (SUNY)

**Jonathan Starr**
*ED*, Open Source Endowment; *PM*, NumFOCUS; *Co-founder,* SciOS & IOSP; *PM*, DeSci Labs

**Alex Talsma**
*Open Source, Data, and AI*
Microsoft

**Ronen Tamari**
*Co-founder*
Cosmik Network

**Sam Teplitzky**
*Open Science Librarian*
UC Berkeley

**Hao Ye**
*Curriculum Lead*
Community for Rigor
University of Pennsylvania

# NEXT STEPS

Time commitment: 4 hours in March & April
Top survey results were for Thursday or Friday at 12pm ET

Suggested schedule

- Th March 5 at 12pm ET
- Th March 19, or Fr March 20 at 12pm ET
- Th April 2 at 12pm ET
- Th April 16, or Fr April 17 at 12pm ET

*Scientific publishing is under growing strain. Researchers are producing more outputs, across more formats, at a pace the traditional publishing model was not designed to support. The question is not whether scientific communication will evolve, but how that evolution will be shaped, and by whom.*

We use streaming and Spotify as a familiar example, not because it got everything right, but because it made a structural shift visible. Music did not change because audiences suddenly wanted playlists. Playlists existed long before streaming. Music changed because digital infrastructure made it possible to break apart bundled products, reconnect them in new ways, and move value through *use* rather than control.

We are global group of researchers, librarians, publishers, organizers, technologists, funders, and infrastructure builders.

# WORKING GROUP MAP

Drag and drop a pin to show everyone where you're from

# MACHINE AUTOMATION: EMBEDDING ATTRIBUTION AS A CULTURAL NORM, AND NOT JUST AS A LEGAL REQUIREMENT.

# UNCOVERING HOW PEOPLE UNDERSTAND, FOLLOW, AND RECEIVE CREDIT THROUGH LICENSING IN A MODULAR RESEARCH WORLD

# Metadata values for attribution (TASLAR):

- Title
- Author
- Source Link
- License Link

- Rights Statement

# LICENSING MODULAR RESEARCH

| Object | | License-able? | License Options |
|---|---|---|---|
| Paper Repo | | YES | License depends on if licensing as a collection or under a single compatible license (machine-determined). E.g., "*All You Need to Know* by Arianna Chevy is licensed under a CC BY 4.0 licence except where otherwise noted. It contains content from other open works, whose authors are clearly indicated in the applicable chapters." |
| **P**anel of **E**vidence | | YES | License depends on if licensing as a collection or under a single compatible license (machine-determined). |
| | PE: Text | YES | Normal CC recommendations based on license compatibility. |
| | PE: Figure | YES | Normal CC recommendations based on license compatibility. |
| | PE: Table | YES | Normal CC recommendations based on license compatibility. |
| (continued on the next slide) | | | |

# LICENSING MODULAR RESEARCH

| Object | License-able? | License Options |
|---|---|---|
| PD: **P**anel **D**ependencies | YES | License depends on if licensing as a collection or under a single compatible license (machine-determined). |
| PD: Code | YES | Licenseable with software licenses. |
| PD: Research Datasets | YES | Normal CC recommendations based on license compatibility. |
| PD: Design Files | YES | Normal CC recommendations based on license compatibility. |
| PD: Lab Notes | YES | Normal CC recommendations based on license compatibility. |
| PDF Paper | YES | License depends on if licensing as a collection or under a single compatible license (machine-determined). |
