REUSE INCENTIVE

WORKING GROUP MEETING #2

THURSDAY, MARCH 5, 2026

LICENSING AS INFRASTRUCTURE FOR OPEN SCIENCE

AGENDA

1. Welcome and Agenda Overview
2. Icebreaker: Member Intros
3. Recap: Modular Licensing
4. Recap: Working Group Goals
5. Creative Commons License Options
6. From PDF to Modular Research
7. Discussion Scenario: Discovering Incentives Among the Friction
8. Group Shareouts
9. Next Steps

ICEBREAKER: MEMBER INTROS

Breakout groups - pair up and share

- What would be your first question after waking up from being cryogenically frozen for 100 years?

RECAP: MODULAR LICENSING

We are reimagining research beyond traditional research outputs like papers and preprints, toward emerging modular research outputs include reproducible notebooks, scientific figures, tables, data, methods, and code.

We see permission to reuse as core infrastructure that incentivizes how modular science is shared. Surfacing object-level context, including licensing, provenance, execution status, and reuse signals, reinforces confident and responsible reuse, attribution, and integration of modular research for both humans and machines.

RECAP: WORKING GROUP GOALS

1. **Surface points of friction around reuse and licensing of modular research** (TODAY'S FOCUS)

2. Explore how licensing serves as a technical and cultural enabler of reuse in modular research

3. Produce a document with a framework and recommendations for modular science reuse

CREATIVE COMMONS LICENSE OPTIONS

Attribution (BY): Credit must be given to you, the creator.

ShareAlike (SA): Adaptations must be shared under the same terms.

NonCommercial (NC): Only noncommercial use of your work is permitted, not primarily intended for monetary compensation.

NoDerivatives (ND): No derivatives or adaptations of your work are permitted.

FROM PDF TO MODULAR RESEARCH

Paper repo (PR) is made of a collection of objects, which is shareable as an object.

PR is made of claims/hypothesis headlines: containers of **panels of evidence (PE)**.

PE supports its claim with **text, figures, and tables,** as an embed or as its own PDF.

PE contains **panel dependencies (PD)**, with Code, Research Datasets, Design Files, or Lab Notes.

Researchers can then publish the entire paper repo as a **PDF Paper** (but not the dependencies, which can just be linked out).

DISCUSSION SCENARIO: DISCOVERING INCENTIVES AMONG THE FRICTION

You are conducting research and come across a very useful modular paper repo relevant to your analysis of horse-sized ducks. 🦆 Consider, discuss, and make note of your Breakout Group's **pros and cons, motivations, and needs** for each of the following situations:

1. **Sharing** the modular components with your colleagues
2. **Referencing** the modular components in your own research
3. **Creating** new analyses from the modular components
